Re: Application for Infrastructure Engineer at Tailscale

Dear Hiring Manager,

I am applying for the Infrastructure Engineer role at **Tailscale**. With over 9 years designing and operating cloud-native infrastructure at scale, and currently serving as Sr. Site Reliability Engineer and technical leader at a US-based intelligent cloud infrastructure company, I am eager to bring that depth to a team building the future of secure networking.

In my current role, I own the reliability engineering and platform strategy for a hybrid cloud serving businesses across the Americas. My day-to-day spans advanced Kubernetes workloads (Cilium, Rook Ceph, Velero), multi-cloud environments on AWS, GCP, and Azure, infrastructure automation with Terraform and Ansible, and end-to-end observability using Prometheus, Grafana, and OpenTelemetry. I drive DevSecOps practices across the platform — vulnerability scanning, IAM hardening, secrets management — and integrate AI tooling into runbooks and postmortems to continuously raise the reliability bar.

What draws me to Tailscale is its approach to distributed mesh networking — building an overlay network that is agnostic to the underlying infrastructure, so any two machines can communicate securely and directly regardless of their location or network environment. I actively use Tailscale in my own infrastructure, and the ease it brings to machine-to-machine communication is something I rely on every day. My background includes BGP, IPv6, and network security — the same foundations that WireGuard and Tailscale's mesh model are built on. I have spoken at KCD Colombia 2025 and FLISOL Medellín on cloud-native and infrastructure topics, led a network and security research group at ITM for four years, and serve as the bilingual (EN/ES) technical bridge between engineering and US-based stakeholders.

I would welcome the opportunity to discuss how I can contribute to Tailscale's infrastructure. My full CV is available at cv.cgaviria.com, and I am happy to provide additional context or references on request.

Thank you for your consideration.

Sincerely,

Christian Camilo Gaviria Castro
